Louisiana to receive more than \$2.2 million from EPA
May 13, 2006
From Staff Reports

Seven Louisiana groups have been selected to receive 10 Brownfields grants from the U.S. Environmental Protection Agency totaling \$2,262,218, said Richard E. Greene, EPA regional administrator.

"Brownfields grants help revitalize former industrial and commercial sites, turning them from problem properties to productive community use," Greene said.

Shreveport-Bossier Community Renewal will receive \$200,000 for asbestos removal at the Petroleum Tower in downtown Shreveport. The Biomedical Research Foundation of Northwest Louisiana in Shreveport will receive \$197,718 for cleanup of the former Wilson Foods property and \$164,500 for the former Caddo Parish Health Unit property.

A Brownfield is a property that may have reuse challenges from hazardous contaminants.
